FOR IMMEDIATE RELEASE

## **Fiopt Set to Provide Consulting and Design Services to FTTx Industry**

**Calgary, AB, July 28, 2008** – Fiopt Communication Services Ltd. is ready to deliver consulting and network design services to the Fiber-to-the-home industry, with a focus on the markets in Canada.

After spending over two years directing an FTTP deployment program in the United States, Managing Director Bryan McIver is set to provide first class consulting and design services to the developers of FTTx networks in Canada.

“Fiopt Communication Services has a focus to provide four major service offerings in each of the strategic areas of FTTx planning and deployment,” says Bryan McIver, “Our products and services will help prospective and active developers both understand these new local loop networks and get their arms around their own specific projects.”

Fiopt will provide: (1) **feasibility studies**, to enable clients to better understand the costs and risks associated with deploying their network; (2) **program management** consulting services, to help owners develop a sustainable and achievable program; (3) **network design** services, in order to provide developers with a reliable set of drawings and prints from which to budget, schedule and build their network; and finally (4) **project management** consulting services, to support telco's, municipalities and construction management firms in the physical deployment of these networks.

### **About Fiopt Communication Services Ltd.**

Based out of Calgary, Fiopt Communication Services is a leading company in the emerging industry of FTTx network deployment. It brings together field experience in the development and planning of telecommunications networks, and a deep knowledge of project planning and management, specializing in the area of FTTx (fiber-to-the-x) networks. With years of experience in the industry, Fiopt is on the leading edge of FTTx network design and implementation.
